

AP & Procurement Policy 2024

Document AP-SOP-2024.07 · Effective 1 January 2024 · Mid-market manufacturing

1. Purpose and domain

This policy governs three-way match of purchase orders, goods receipts, and vendor invoices for Helios Industrial (P2P). All amounts are United States dollars. Multi-currency conversion is not authorized in this revision.

Match keys for structural alignment are **PO Number** and **PO Line Item ID**. Vendor legal names may differ across ERP, packing slips, and invoices (for example Dell Inc versus Dell Computers). Semantic normalization is required; do not fail a match solely on vendor spelling.

2. Price and quantity tolerance (Math Engine — not Matcher)

The Matcher records evidence only. Numeric gates are applied after match: allow the lesser of **2% of PO line amount** or **USD 50.00**. Formula: $\text{MIN}(0.02 \times \text{po_line_amount}, 50.00)$. Variances inside the gate stay on the matched path; larger gaps flag for buyer review.

A two-cent rounding difference is a near-match, not an automatic reject.

3. Unreceived invoices (Decision / approval gateway)

If an invoice has no matching goods receipt and the invoice total is under USD 500.00 **and** the vendor is classified Tier-1 in the vendor master, Accounts Payable may auto-approve.

All other unreceived invoices route to buyer review, including Tier-2/Tier-3 vendors and any invoice at or above USD 500.00.

4. Vendor tier snapshot (knowledge)

Tier-1: Dell Inc, SKF USA Inc, Fastenal Company, Mitsubishi Electric US, Siemens Industry Inc.

Tier-2: Bosch Rexroth Corp, Grainger Inc. Tier-3: Acme Tooling LLC (custom tooling — no auto-approve on unreceived invoices).

5. Output

Produce a multi-tab Excel workbook: Summary, Matched, Exceptions. Slack or email dispatch is outside this operating procedure for the current control environment.
